

# Table of Contents

<b>Preface</b> .....	xi
<b>List of Contributors</b> .....	xiii
<b>Introduction</b> .....	xix
Z. Lukszo and M.P.C. Weijnen	
<b>Part I Generic Infrastructures</b>	
<b>1 Intelligence in Transportation Infrastructures via Model-Based Predictive Control</b> .....	3
R.R. Negenborn and H. Hellendoorn	
1.1 Transportation infrastructures .....	4
1.2 Towards intelligent transportation infrastructures .....	7
1.3 Model predictive control .....	13
1.4 MPC for intelligent infrastructures .....	19
1.5 Conclusions and future research .....	21
References .....	22
<b>2 Model Factory for Socio-Technical Infrastructure Systems</b> .....	25
K.H. van Dam and Z. Lukszo	
2.1 Introduction .....	26
2.2 Model factory for socio-technical systems .....	27
2.3 Illustrative case studies .....	36
2.4 Decision support using the model factory .....	43
2.5 Conclusions and future research .....	49
References .....	50

## Part II Electricity Infrastructures

<b>3</b>	<b>Prevention of Emergency Voltage Collapses in Electric Power Networks using Hybrid Predictive Control</b> . . . . .	55
	S. Leirens and R.R. Negenborn	
3.1	Introduction . . . . .	56
3.2	Power network operation . . . . .	60
3.3	Hybrid dynamical models of power networks . . . . .	64
3.4	Model predictive control . . . . .	73
3.5	Simulation studies . . . . .	79
3.6	Conclusions and future research . . . . .	84
	References . . . . .	86
<b>4</b>	<b>Module-Based Modeling and Stabilization of Electricity Infrastructure</b> . . . . .	89
	L. Xie and M.D. Ilić	
4.1	Introduction . . . . .	90
4.2	Literature review . . . . .	91
4.3	Our approach . . . . .	92
4.4	Numerical examples . . . . .	102
4.5	Conclusions and future research . . . . .	104
	References . . . . .	107
<b>5</b>	<b>Price-based Control of Electrical Power Systems</b> . . . . .	109
	A. Jokić, M. Lazar, and P.P.J. van den Bosch	
5.1	Introduction . . . . .	110
5.2	Optimization decomposition: Price-based control . . . . .	114
5.3	Preserving the structure: Distributed price-based control . . . . .	118
5.4	Conclusions and future research . . . . .	128
	References . . . . .	130
<b>6</b>	<b>Survivability and Reciprocal Altruism: Two Strategies for Intelligent Infrastructure with Applications to Power Grids</b> . . . . .	133
	P. Hines	
6.1	Introduction . . . . .	134
6.2	Stress, blackouts, and complexity . . . . .	138
6.3	Survivability . . . . .	141
6.4	Adaptive reciprocal altruism . . . . .	144
6.5	Conclusions and future research . . . . .	148
	References . . . . .	149
<b>7</b>	<b>Multi-agent Coordination for Market Environments</b> . . . . .	151
	R. Duan and G. Deconinck	
7.1	Introduction . . . . .	152
7.2	Emerging model of the next generation electricity infrastructure . . . . .	155
7.3	Electricity market structure and mechanism . . . . .	159

7.4	A promising multi-agent system framework for coordination . . . . .	163
7.5	Preliminary results . . . . .	174
7.6	Related work . . . . .	175
7.7	Conclusions and future research . . . . .	176
	References . . . . .	177
<b>8</b>	<b>Intelligence in Electricity Networks for Embedding Renewables and Distributed Generation . . . . .</b>	<b>179</b>
	J.K. Kok, M.J.J. Scheepers, and I.G. Kamphuis	
8.1	Introduction . . . . .	180
8.2	On the special nature of electricity and its infrastructure . . . . .	181
8.3	Electricity networks and electricity markets . . . . .	183
8.4	Changing nature of electricity generation . . . . .	188
8.5	Intelligent distributed coordination in electricity . . . . .	194
8.6	Field test results . . . . .	202
8.7	Conclusions and future research . . . . .	206
	References . . . . .	208
<b>9</b>	<b>Social and Cyber Factors Interacting over the Infrastructures: A MAS Framework for Security Analysis . . . . .</b>	<b>211</b>
	E. Bompard, R. Napoli, and F. Xue	
9.1	Introduction . . . . .	212
9.2	A general framework for security analysis . . . . .	213
9.3	Multi-agent model for the analysis of coordination and control . . . . .	220
9.4	Analysis of information impact . . . . .	228
9.5	Conclusions and future research . . . . .	232
	References . . . . .	232
<b>10</b>	<b>Distributed Predictive Control for Energy Hub Coordination in Coupled Electricity and Gas Networks . . . . .</b>	<b>235</b>
	M. Arnold, R.R. Negenborn, G. Andersson, and B. De Schutter	
10.1	Introduction . . . . .	236
10.2	Energy hub concept . . . . .	240
10.3	Modeling multi-carrier systems . . . . .	242
10.4	Centralized model predictive control . . . . .	252
10.5	Distributed model predictive control . . . . .	254
10.6	Simulation results . . . . .	261
10.7	Conclusions and future research . . . . .	271
	References . . . . .	272
<b>Part III Road Traffic Infrastructures</b>		
<b>11</b>	<b>Model-based Control of Intelligent Traffic Networks . . . . .</b>	<b>277</b>
	B. De Schutter, H. Hellendoorn, A. Hegyi, M. van den Berg, and S.K. Zegeye	
11.1	Introduction . . . . .	278

11.2	Traffic models	281
11.3	Model-based predictive traffic control	294
11.4	Case studies	299
11.5	Conclusions and future research	305
	References	307
<b>12</b>	<b>Intelligent Road Network Control</b>	<b>311</b>
	J.L.M. Vrancken and M. dos Santos Soares	
12.1	Introduction	312
12.2	Research questions	314
12.3	Approach	314
12.4	Related work	315
12.5	TCA: The architecture for road traffic control	316
12.6	The DTCA architecture	317
12.7	Experimental implementation	319
12.8	Future challenges	322
12.9	Conclusions and future research	323
	References	324
<b>13</b>	<b>An Integrated Dynamic Road Network Design Approach with Stochastic Networks</b>	<b>327</b>
	H. Li, M.C.J. Bliemer, and P.H.L. Bovy	
13.1	Introduction	328
13.2	Modeling travelers' departure time/route choice behavior	329
13.3	Reliability-based dynamic network design	331
13.4	Solution approach	334
13.5	Case study	338
13.6	Conclusions and future research	344
	References	345
<b>14</b>	<b>Dealing with Uncertainty in Operational Transport Planning</b>	<b>349</b>
	J. Zutt, A. van Gemund, M. de Weerd, and C. Witteveen	
14.1	Introduction	350
14.2	A framework for distributed operational transport planning	352
14.3	Operational transport planning methods	354
14.4	Dealing with uncertainty	362
14.5	Experimental evaluation	365
14.6	Conclusions and future research	373
	References	374
<b>15</b>	<b>Railway Dynamic Traffic Management in Complex and Densely Used Networks</b>	<b>377</b>
	F. Corman, A. D'Ariano, D. Pacciarelli, and M. Pranzo	
15.1	Introduction	378
15.2	Problem description	380
15.3	Dynamic traffic management strategies	385

15.4	Decision support system .....	387
15.5	Computational experiments .....	395
15.6	Conclusions and future research .....	402
	References .....	402
<b>Part IV Water Infrastructures</b>		
<b>16</b>	<b>Flood Regulation by Means of Model Predictive Control .....</b>	<b>407</b>
	T. Barjas Blanco, P. Willems, P-K. Chiang, K. Cauwenberghs, B. De Moor, and J. Berlamont	
16.1	Introduction .....	408
16.2	Hydrodynamic water system modeling .....	409
16.3	Flood regulation .....	420
16.4	Experimental results .....	431
16.5	Conclusions and future research .....	435
	References .....	436
<b>17</b>	<b>Predictive Control for National Water Flow Optimization in The Netherlands .....</b>	<b>439</b>
	P.J. van Overloop, R.R. Negenborn, B. De Schutter, and N.C. van de Giesen	
17.1	Introduction .....	440
17.2	Modeling and MPC control of open water systems .....	444
17.3	MPC for the North Sea Canal and Amsterdam-Rhine Canal .....	450
17.4	Distributed MPC for control of the Dutch water system .....	453
17.5	Conclusions and future research .....	460
	References .....	460
<b>18</b>	<b>Decentralized Model Predictive Control for a Cascade of River Power Plants .....</b>	<b>463</b>
	A. Şahin and M. Morari	
18.1	Introduction .....	464
18.2	Modeling .....	466
18.3	Controller design .....	471
18.4	Simulation results .....	478
18.5	Conclusions and future research .....	484
	References .....	484
<b>19</b>	<b>Enhancing the Reliability and Security of Urban Water Infrastructures through Intelligent Monitoring, Assessment, and Optimization .....</b>	<b>487</b>
	W. Wu and J. Gao	
19.1	Introduction .....	488
19.2	Water distribution system .....	489
19.3	Monitoring and modeling in water distribution systems .....	494
19.4	Intelligent assessment in water distribution systems .....	501

---

19.5	Multi-objective optimal pump scheduling .....	506
19.6	Water distribution system rehabilitation .....	512
19.7	Conclusions and future research .....	514
	References .....	515
<b>20</b>	<b>Long-term Sustainable Use of Water in Infrastructure Design .....</b>	<b>517</b>
	R. van der Brugge and J. van Eijndhoven	
20.1	Introduction .....	518
20.2	Conceptual framework .....	519
20.3	Water as a central element in the history of The Netherlands .....	522
20.4	Rotterdam, a water-related history .....	523
20.5	Conclusions and future research .....	527
	References .....	528
